

Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

Project Title: Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

Team ID: LTVIP2025TMID51897

Team Size: 3

Team Members and Roles:

Name	Role
Myla Rishika	: Team member
Desu Deekshitha	: Team Leader
Potu Pranathi Priya	: Team member

Internship: JNTUK – SmartBridge (Data Analytics with Tableau)

Objective:

- To perform data analytics on UNESCO Heritage Sites dataset.
- To build visualizations and dashboards in Tableau.
- To integrate the dashboards and story into a web application using Flask and Bootstrap.

Dataset:

- Source: SmartBridge provided dataset (whc-sites-2019.csv)
- Columns Used: Region, Site Name, Criteria, Area in Hectares, Latitude, Longitude
- Data cleaning done in Tableau itself (no separate pre-processing required).

Visualizations Created in Tableau:

1. Bubble Map: Number of Heritage Sites per Region.
2. Top 10 Regions by Area (bar chart).
3. Dashboard combining above visualizations.
4. Storyboard showing overall analysis.

Web Integration:

- Used Flask framework (Python) and Bootstrap template.
- Embedded Tableau dashboards and story into responsive web pages.
- Pages Created: Home, About, Dashboard, Storyboard.

Outcome:

- A complete interactive web application that presents insights from UNESCO Heritage Sites dataset.

- Deployed locally and ready for demonstration.

Technologies Used:

- Tableau Public
- Python Flask
- HTML, CSS, Bootstrap
